Moving product in and out of your container is a snap with a Medlin steel dock board. Unlike an edge of dock or dock leveler, a dock board can be relocated to accommodate multiple door warehouse applications. We feature Heavy Duty Diamond plate with welded side curbs for superior strength. Use the lifting chains to easily move your dock board to the desired location. Optional inbed lifting loops are also available on certain models. We offer standard dock leg or pin dock board designs. With Capacities from 10,000 to 30,000 pounds, we are sure to have the right dock board for you.
